EDUCATION

COMMON PLAN ENGINEERING

Universidad de Chile
2003-2005

INDUSTRIAL ENGINEERING

Universidad de Chile
2006-2010

2011 Graduated with Distinction

ABOUT ME

I am an entrepreneurial, motivated, pro-active and avid-learner, who conserves high standards of engineering processes since college, after some years of working as an Industrial Engineer performing data-driven process optimizations.

My problem-solving drive made me want to switch into programming, because I found it dynamic and more engaging as a career to create impactful work. My strong foundations in math, logical thinking and experience with coding during my first years in Engineering, contributed to make it an easier transition.

I love learning in general and this has contributed greatly to my quick adaptation to new working environments and requirements. I particularly enjoy learning coding, because they are skills I can apply outside of my regular job for projects of my own.

WORK EXPERIENCE

Junior Flutter App Developer: February 2021- Present Travel Union

- Worked in UI aspects of the app, re-structuring the layouts of different functionalities, with the goal of making it more intuitive and simple.
- Evaluated the code for all the regionalization language files in which I was proficient to ensure that the correct meanings/messages were conveyed. It resulted in adding new supported languages to the app.
- Implemented changes in business logic and user interface for some of the extra accounts options inside the app.
- Designed a new system for "Children Chores" with Interface, and business logic, to integrate as a new app functionality.
- Supported Marketing Effort for Retail by Providing data obtained from the app Stores, in the form of monthly reports that enabled decisions by Marketing and Management

Tools Used: Flutter/Dart/Git-Github/Photoshop

Android Training (personal Project): 2019-2020

- Worked in learning Java/Android app development: XML Layout Formatting, Linear, Constraint, Relative Layout.
- Used ListView and RecyclerView for various apps that needed the use of lists.
- AsyncTask for multithread processing and getting information out the internet to be processed in the application.

Photoshop

- Geolocation and interactions with Google Services, specifically for google maps for a geotracking application
- Firebase DataBase/FireStore to save information from the app.

Junior Navision Developer: June - November (2019)

Navitrans

- Improved modules in Navision/BC 365 for clients in the Transport/Logistics sector, tasks were assigned to me for improvements, updates , or changes for already existing modules.
- Completed a Microsoft Certificate of Achievement for Development Foundation in MS Dynamics 365 BC

Preparation for AU Visa: September 2017- July 2018

- During this time I prepared for the Australian Visa English exams, competence assessment for Engineers of Australia and enrolled in a Suply Chain Analytics course on MITx which was one of the requirements I had to fulfill for a successfull assessment.

Personal Project : March 2014- January 2015

- Good Game. A brick and mortar store for video-games and other hobbies. I had other partners, and it was a great opportunity to learn in-situ about management, marketing, and many other things that you do not consider unless you are in the midst of it.

BI Analyst: May 2012- July 2017
Pincenter/RedFacil

- I was in charge with the analysis of the current businesses and projects. RedFacil was an acquisition from Pincenter, this brought a number of retail clients for the distribution of prepaid phone cards that expanded the Pincenter portfolio. My main task was to establish an unified system of metrics to assist management in the decision of which ones to keep as clients. This resulted in a more leaner operation that saved thousands of dollars.
- Reporting Control of RedFacil was added to my responsibilities. Sales Forecasts, and integration of it into the annual budget of the Holding .
- I planned and coordinated the implementation of a Business Intelligence Software (QlikView)with the TI department. . This resulted in a system of reporting and alarm system, that helped take swift decisions in points of sales that were underperforming.
- I re-organized the provisions and reporting to accounting system, by establishing a clear workflow with all participants involved. This improved the process of the end of the month that took 4 days to complete, to just 2.
